## ***Guidelines for the Index of the first 20 volumes of Anaesthesia and Intensive Care (1972-1992 inclusive)***

Due to variations in indexing styles of the Journal over the first twenty volumes there may be some limitations in searching for particular topics under general headings. This index is slightly more comprehensive on an author-based system; however, every effort has been made to aid a subject-based search, and there are multiple entries for each article in the index. The initial page number only is given for all entries. Volume 1 consists of two issues in 1972 and four issues in 1973; thereafter there were four issues per annum (volume).

Following these guidelines will assist in identifying the required article.

### **Original articles and Case Reports:**

These entries reflect differing editorial styles of indexing and changes in referencing standards in the last twenty years and is divided into three groups:
